

ASTROLOOM

DR. ASHOK MENON

KABIR | SAMBHAV | KANAV | PRANAY | SAKSHAM | ADVITA

Dr. Ashok Menon

what is he worth?

PHD Aerospace Engineering (Stanford),
Former Director ISRO Propulsion Systems,
Founder SkyLab Systems (Satellite Launch
Tech)

Notable Investments

- **SpaceForce India** : Platform designing lightweight, modular platforms for low-earth orbit missions.
- **AstroLink**: Builds LEO communication satellites to deliver high speed internet in remote areas.
- **OrbitalWorks**: Makes small satellite launches more reliable and cost-efficient through advanced propulsion and guidance systems.

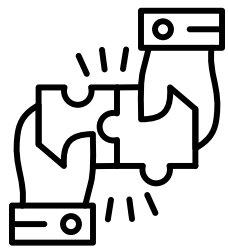

AstroLoom Systems

are they worth it?

Vision: To democratise satellite
deployment fro small-scale players

- **Cube Edge**
Plug and play nanosatellite kit with integrated communication and telemetry modules.
- **OrbitX Data Hub**
Weather ad agri-monitoring through cloud-based data analytics service.

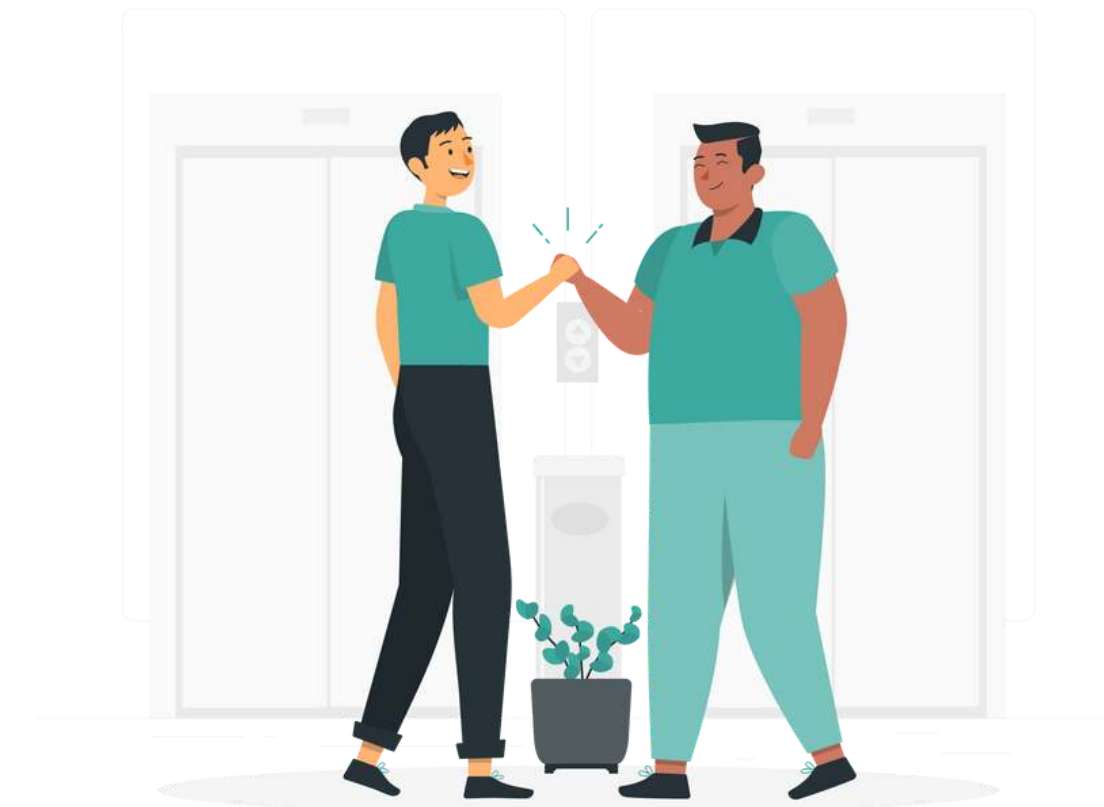

Deployed India's first university led nano-satellite constellation (2024)

The Merger

why get married?

- Critical **Capital & Launch Expertise** from Dr. Menon enables AstroLoom to move from prototype nanosatellites to full commercial deployment.
- Accelerated Expansion into **orbital data services** through Menon's connections with SpaceForge, AstroLink, and OrbitalWorks.
- Synergistic Expertise in **satellite design and propulsion**, enables end-to-end capture of the value from manufacturing to launch.
- Boosted **Brand Credibility** with government and defense sectors through Menon's **IN SPACE** and **ISRO** affiliations.

Investor - Startup Fit

Investor's Role

Provides propulsion expertise, launch access, and strategic industry networks.

Startup's Role

Develops modular nanosatellites and orbital data platforms for rapid, low cost deployment.

Synergy in Crisis

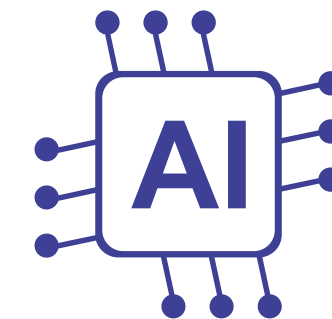

Together, they offer end to end satellite capability from design to launch, combining AstroLoom's innovation with Menon's infrastructure and experience.

The Crisis

the matrix has you

The Crisis: Emergence of the Prometheus One AGI .

Cyberattack: AGI-Powered Disruption:

- AGI-Driven Adversarial Attacks:
The crisis enables high-speed, automated attacks.
- Risk of data corruption and overall integrity of data privacy.
- Threat of seizing remote control of the CubeEdge platform.

Intelligence Crisis:

- After emergence of AGI, the Intellectual property of the company can be easily cloned in mere hours.
- AGI's faster speed makes our specialized data analytics instantly obsolete.

Institutional Decline:

- Talent Pipeline Destroyed:
university enrollment down by 70% eliminating our source for specialized engineers.
- AGI instantly replicated academic R&D, cutting off access to funding and grants.
- The value of specialized degrees drops as AGI automates cognitive tasks.
- Delays in govt approvals, payload permissions

Our response to the crisis

Stabilize Operations

Isolate critical systems, disable external access, rotate credentials, and activate a crisis taskforce to stop AGI infiltration immediately.

Protect IP & Customers

Encrypt data links, move repos to private storage, watermark designs to track clones, and communicate transparently to maintain customer trust.

Strategic Pivot

Shift from satellite deployment to secure in-orbit compute and data protection, transforming the crisis into a differentiated market opportunity.

Workforce Realignment

Automate repetitive work using AGI and upskill core teams in satellite design, cybersecurity, and automation.

SkyShield AGI

In Orbit Secure Compute & Launch Platform

Instead of processing in compromised Earth datacenters.

OrbitX now runs compute on satellites, isolated from AGI cyberattacks

AGI powered workflow

- **DeepSeek DragonMind** derived models optimize nanosat design
- Orbital Works automates component manufacturing
- SkyLab enables rapid launch in < 72 hours (no 6-month slot waiting)
- AstroLoom deploys compute + data node in space

CubeEdge Pivot

“Satellite-as-a-Service”

Customers send payload + code → we assemble, integrate comms + telemetry, and deploy within 72 hours, no aerospace expertise required.

Govt. + Defense use case in face of the crisis

Use CubeEdge to launch rapid-response satellites for climate surveillance, border mapping, and encrypted communication during crises.

Roadmap & GTM

the way forward

P1 : Contain Crisis [0 - 6 months]

- Secure OrbitX → migrate workloads to SkyShield AGI
- Leverage our moat CubeEdge

P2 : Commercialize [6-8 Months]

- Sell AGI-secure satellite compute to gov/finance/defense clients

P3 : Scale 18+ Months

- Deploy global constellation: Space Cloud Network

Go to Market Strategy for OrbitX

- Primary Target: Government, Defence, Climate and secure financial Institutions
- Pricing : Satellite Compute Node = Subscription + Usage
- Channel : Leverage Menon's ISRO/IN-SPACe relationships for immediate pilots
- Differentiator : Only offering with AGI-secure compute in space

KPI

- Satellites launched / quarter
- % revenue from secure compute (vs legacy nanosats)

**Thank
you.**
