Travel Smart , Share the Journey

PROBLEM

Traffic Congestion :

Daily commuters in urban areas struggle with heavy traffic, making commutes time consuming and stressful.

High Transportation Costs :

Traditional ride-hailing services are often expensive, especially for daily use.

Unpredictability in Ride-Hailing :

Booking rides spontaneously can be unpredictable due to driver unavailability or fluctuating prices.

Coordination Hassle :

Coordinating with individual drivers for each trip is time-consuming and inconvenient.

Limited Public Transport Options :

Public transport lacks the flexibility and convenience of door-to-door service, with suboptimal travel times for regular commuters.

Lack of Reliable Solutions :

There is no cost-effective, efficient, and reliable transportation solution tailored for individuals with fixed travel routes, such as school or work commutes.

SOLUTION

JustPool provides a smart fixed-route transportation solution tailored for urban commuters in Tier 1 and Tier 2 cities. The service offers:

Tailored Commute :

Users provide their pickup and drop-off locations along with preferred times.

Optimized Routes :

We assign users to the most efficient route based on their details.

Door-to-Door Service :

Passengers are picked up and dropped off at their doorstep in a traveler vehicle.

Shared Rides :

Passengers with similar routes share rides, reducing costs compared to traditional ride-hailing services.

Hassle-Free :

Eliminates the need to coordinate with individual drivers or dealing with cancellations

Cost-Effective :

Shared rides lead to lower transportation costs.

Eco-Friendly :

Reduces traffic congestion and promotes sustainability by minimizing individual car usage.

HOW ARE WE DIFFERENT !?

NOT LIKE UBER SHUTTLE OR SIMILIAR SHUTTLE SERVICES

Uber Shuttle lacks door-to-door service, while we ensure pickups and drop-offs at the exact predefined address for better convenience.

NOT LIKE OLA OR UBER

Traditional ride-hailing services are on-demand and expensive for daily commutes. We focus on affordability with fixed, consistent routes and a subscription model.

NOT LIKE PUBLIC TRANSPORT

Public buses and metros require multiple changes between modes of transport, adding inconvenience and longer travel times. We provide a seamless, direct travel solution.

STRENGTHS

- Affordable subscription-based model eliminates price fluctuations.
- Fixed routes optimized with AI ensure minimal delays and predictable travel times.
- Tech-enabled app provides convenience with real-time tracking and scheduling.
- Eco-friendly solution reduces traffic congestion and pollution.
- Removes the need for coordinating with individual drivers, making commuting hassle-free.

WEAKNESS

- Limited to pre planned routes, reducing flexibility for spontaneous travel.
- High cost to rent vehicles in the beginning.
- Requires a critical mass of users per route to be profitable; starting off may result in losses due to insufficient users on some routes.

THREATS

- Competition from ride-hailing services and carpooling platforms.
- Regulatory challenges in the transportation sector.
- User adoption may be slow due to reliance on personal vehicles or public transport.
- Traffic and infrastructure limitations in urban areas could impact service reliability.

OPPORTUNITIES

- Growing demand in Tier 1 and Tier 2 cities for reliable and cost-effective daily commutes.
- Potential partnerships with schools, offices, and housing societies.
- Rising environmental awareness encourages shared and sustainable transportation.

SWOT ANALYSIS

COMPETITOR ANALYSIS

UBER AND OLA (RIDE-HAILING SERVICES)

STRENGTHS

- Well-established platforms with a large user base.
- Provides flexibility in booking rides at any time and wide availability of drivers

WEAKNESS

- High costs for daily commutes, especially during peak hours.
- Unpredictability due to driver unavailability or surge pricing.
- Requires constant coordination with drivers.
- High chance of drivers cancelling leading to unexpected delays.

PUBLIC TRANSPORT (BUSES, TRAINS, ETC.)

STRENGTHS

- Generally low cost for daily commuting.
- Widely available in major cities and accessible to many people.

WEAKNESS

- Lack of flexibility in routes and timings.
- Does not provide door-to-door service, requiring additional walking or transfers.
- Overcrowding and delays during peak hours.
- Limited comfort and convenience for regular commuters.

PRIVATE VEHICLE OWNERSHIP

STRENGTHS

- Complete flexibility in route, time, and vehicle choice.
- Comfortable and convenient for daily use.

WEAKNESS

- High costs associated with fuel, maintenance, parking, and insurance.
- Contributes to traffic congestion and environmental pollution.
- Not feasible for individuals without access to a private vehicle.

MARKET ANALYSIS & CONSUMER BASE

Target Market :

- Commuters with fixed routes (students, professionals, families) in urban and semi-urban areas.
- Focus on Tier 1 and Tier 2 cities with traffic congestion and inefficiencies in public transport.

Market Size & Growth :

- Rapidly growing transportation market in India, with increasing demand for cost-effective and reliable commuting solutions.
- Rise in popularity of shared mobility and subscription-based models for daily commutes.

Consumer Behavior :

- Preference for affordable, reliable, and eco-friendly transportation.
- Demand for door-to-door service, predictable travel times, and reduced hassle in coordination.

FINACIAL FORCAST

Average cost per month for travel for an average user :

300 (Average cost of uber ride) X 2 (twice a day) X 24 (working day in a month)=14400

After speaking to Traveller Rental Vendors we got an average cost of 1,10,000 per month for renting a 20 seater traveller for a pickup and drop service.

Cost per user per month :

1,10,000 (cost of traveller per month) / 20(seats in the traveller) = 5,500

Being a rental the cost of the traveller includes cost of driver as well as any fuel and maintenance of the vehicle.

So assuming we charge 7,000 for a normal sized route we make a profit of 1,500 per user per month.

That gives us a profit of 30,000 per month per traveller.

For the consumer it results in a cost saving of over 50% apart from the hassle free experience that they will be getting.
